5.0		2.5	
5.0		2.4	
5.0		2.4	
5.0		2.4	

Technical Tips and advice

- Storage** - After your winter season riding, remove your tyres and clean them and add oil to studs, then store at room temp to avoid damage and they will be ready for the following season.
- Choice** - By choosing the correct tread pattern for your riding, be it off road MTB for full off road winter adventure riding, or city commute, check the user chart to make the right choice for you.
- Running in** - Its always better for the first 50km, to run your winter tyre in, this means not riding at extreme limits to allow the studs to bed in, this is most important when using e-bike with high torque electric motors.
- Pressures** - For more details on running pressures per size go to the technical sheet.
