MADE IN FINLAND

PRODUCT CATALOGUE OF:

2026 WINTER TYRE RANGE

Ride with uncompromised quality on our 100% EUDR compliant.
The DMACK ethos is simple – provide high quality tyres across all segments

dmack

SUOMI TYRES

The DMACK brand was created and competed at the highest level of motorsport as one of just two authorised tyre suppliers alongside Michelin to the FIA World Rally Championship between 2011 and 2017 (see: dmacktires.com).

The business is focused on providing premium brand performance with a specific emphasis on quality, performance, and exceptional value.

The same expertise forms the foundation for DMACK's new venture: the production of Suomi Tyres for bicycles.

Rubber compound, especially designed for winter use, as well as winter studs made in Finland, ensuring excellent grip even on the toughest conditions.

Local production is key with Suomi Tyres, and we are proud to say all our bicycle tyre production is done in Finland.

Yes, There Is Actually a Tyre Factory in Finland

Tucked away in the town of Lieksa, amidst the forests of Eastern Finland, a unique tradition continues—Suomi Tyres is proudly manufacturing high-quality bicycle tyres right here in the EU.

The story dates back to 1974 when Finland's legendary **Nokia's rubber industry** centralized bicycle tyre production in Lieksa. At the turn of the millennium, **Nokian Tyres** had become the world's leading manufacturer of studded winter bike tyres, producing for **Nordic, Central European, and North American markets**.

In the year 2000, **Nokian Tyres** manufactured **1.2 million bicycle tires** and **1.1 million inner tubes**.

Now, under ownership by DMACK—an internationally recognized name in motorsport—this legacy has been reborn as Suomi Tyres DMACK Nordic Oy.

We are now one of the very few remaining tyre factories in the European Union producing bicycle tyres locally. Every tyre is crafted in Lieksa, using local expertise, environmentally sound materials, and advanced manufacturing techniques, including our unique Finnish-made steel studs for unmatched winter grip.

Made in Lieksa, Finland. Designed for Nordic conditions. Engineered to endure.

dmack
SUOMI TYRES

Catalogue: Reliable Grip for Nordic Winters

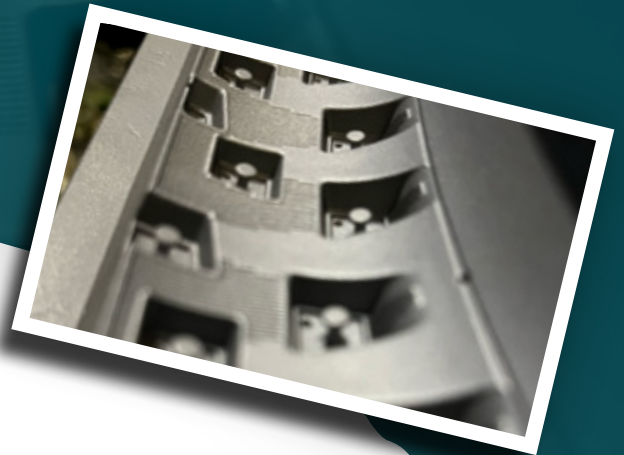

Suomi Tyres produces high-quality studded bicycle tyres for all riding needs – whether you're commuting in the city, tackling winter trails, or riding an e-bike.

Made in Finland, the tyres combine superior grip from Finnish-made studs, to winter specific rubber compound, and tread patterns designed for harsh winter conditions.

The range includes MTB, Gravel, City and most recently CARGO bike all available also if E-BIKE specifications and extra load, in current market sizes and stud configurations to suit all users. Also available in MTB tubeless specifications with anti puncture protection to ensure safe performance in all Winter conditions.

SUOMI TYRES STUDS.

Suomi Tyres' studs: The Best Grip, the Best Durability

Two things set the studs in Suomi Tyres' tires apart from the competition: grip and durability.

Suomi Tyres uses studs manufactured by Turvanasta Oy, a Finnish company with a long tradition and the highest expertise in the market.

The company began developing and manufacturing studs in the 1960s. During its operational period, it has made several innovations, the best of which have become "classic studs". These inspire several stud models to this day – both Turvanasta's own and those made by others.

Turvanasta says it made its best studs through close cooperation with its customers. This has also been the case with Suomi Tyres.

Stud positions already in the casting molds

Whereas Turvanasta Oy has refined the studs used in our bicycle tires to be the grippiest on the market through its product development, Suomi Tyres has focused on ensuring the studs stay in place.

Usually, studs are installed in tires in such a way that once the tire is ready, holes are drilled into it for installing the studs.

At Suomi Tyres, the holes are already present in the tire molds (**see image above**). This makes the holes more precise in size and shape, ensuring that the stud stays in place more securely and does not come loose even under heavy use.

"We are very satisfied with our cooperation with Turvanasta Oy. In addition to technical aspects, this also supports our principle of local production: by using a Finnish manufacturer, we avoid long transport distances, among other things," says Suomi Tyres' CEO **Dick Cormack**.

Read more: [Turvanasta.com](https://www.turvanasta.com) If you want to purchase studs separately, please contact: ilpo.leppa@turvanasta.fi

Near production

Local production is one of the key aspects of Suomi Tyres' operating philosophy. Why transport materials from the other side of the world when the expertise and materials can all be found close by?

Our suppliers have been in their field of expertise for decades, developing many innovations and products for our local production.

This expertise – in rubber compounding, the most gripping and durable studs, the design and manufacture of a tire with top-notch features – comes together at Suomi Tyres.

alum. crown studs with hard metal pins

Precision-molded stud sockets for maximum retention

Special rubber compound with puncture protection

MTB

TUBE TYPE

CROWN STUD

Piikkisika Tube Type

A modern winter mountain bike tire that offers groundbreaking performance.

The tire's pattern is specially designed for mountain bike tires, and the studs are arranged so that the maximum number of spikes touches the ground at every moment. This ensures consistent grip across different parts of the tire.

The Piikkisika tire's frame, designed specifically for winter conditions from a special rubber compound, effectively protects against punctures and adapts to freezing temperatures.

The winter-appropriate tread, combined with aluminum crown-tipped hard metal studs (up to 408 pcs!), ensures the best grip on the market. The number of studs can be up to 408.

The stud sockets are molded into the tread pattern during the casting phase, setting this tire apart from competitors: this ensures the stud sockets are precisely shaped, and the stud does not come loose during use.

The tire's edge cable is made of durable triple-wrapped steel.

Steel BLUNT STUD

Hile W240

A reimagined classic, the Hile W240 delivers confident winter riding for hybrid, city, gravel, and mountain bikes.

With a robust pattern that surpasses the Rouda for aggressive traction on both ice and snow, this tire boasts 240 durable, Finnish-made full-steel studs for superior grip.

Its lightweight yet sturdy construction featuring a non-toxic winter rubber compound, Skinwall profile, and reflective sidewalls ensures excellent durability, lasting performance, and enhanced visibility in harsh conditions. Expertly crafted in Lieksa, Finland, it combines Nordic reliability with optimized rolling efficiency for winter's toughest terrain.

STUD

Stud 62A

Built for reliable winter commuting and recreational rides over snow-covered paths and icy streets, the Stud 62A offers secure traction without sacrificing ease of rolling. Its tread features 62 durable steel-core studs that grip the coldest surfaces with confidence. Rugged gumwall construction, reinforced with steel-cable and a high thread count casing, delivers outstanding durability and puncture resistance.

This tire maintains a light-rolling ride, thanks to its thoughtfully designed profile and generous air volume.

Crafted from a winter rubber compound and manufactured in Lieksa, Finland, the Stud 62A combines Nordic craftsmanship, safety-conscious materials, and dependable performance for winter's daily challenges.

Technical Tips and advice

- Storage** - After your winter season riding, remove your tyres and clean them and add oil to studs, then store at room temp to avoid damage and they will be ready for the following season.
- Choice** - By choosing the correct tread pattern for your riding, be it off road MTB for full off road winter adventure riding, or city commute, check the user chart to make the right choice for you.
- Running in** - Its always better for the first 50km, to run your winter tyre in, this means not riding at extreme limits to allow the studs to bed in, this is most important when using e-bike with high torque electric motors.
- Pressures** - For more details on running pressures per size go to the technical sheet.
